

Thank you for purchasing a Sign from WoodWerx.com

If you are displaying your sign outdoors, or if you chose to purchase the Outdoor Clear coat option on your order, please read this information carefully. The info below will help you to maintain your sign to increase its ability to last for years to come.

If you did not choose to purchase the Outdoor Clear Coat option and want to display your sign outdoors, your sign was coated (front and sides only) with Minwax Fast Drying Polyurethane Protective Wood Finish. You can purchase this in quart or spray. You may coat your sign and maintain it with this product, or you can coat the sign with the Outdoor Clear Coat product.

Outdoor Clear Coat

If you are displaying your sign outdoors and you chose to purchase the “Outdoor Clear Coat” option on your order, two coats of Outdoor Clear Coat have been applied to the front and back of your sign. This clear coat is a low VOC finish. It is fortified with UV absorbers to stabilize and protect the integrity of the finish*, and built-in mildewcides to slow mold and mildew growth. *The UV additive will protect the integrity of the film, but will not prevent the wood from changing color from sunlight.

Every Outdoor sign will require annual or bi-annual maintenance. The clear coat, and possibly the other finishes, will need to be reapplied to keep your sign beautiful for years to come.

The Outdoor clear coat that we use is General Finishes Exterior 450 Water Based Topcoat. You can spray this coating or brush it on.
